To whom it may concern

De Wets Wellpoints and Boreholes

We have been associated with De Wet's Wellpoints and Boreholes since 1996. During this time we have had tremendous results in raising and equipping community micro-farming and greening projects thus enabling previously disadvantaged to become self-sufficient.

To allow the success of the community micro-farming and greening projects, provision and continuous supply of water is paramount.

For this purpose De Wet's Wellpoints and Boreholes has been at hand to provide the borehole installations, invaluable advice, suggestions and recommendations making each project a success.

Many hundreds of micro-farmers in over 200 community garden projects among the previously disadvantaged now have vegetable gardens growing with their crops providing a much needed food security and income.

We have enjoyed working together with De Wet's Wellpoints and Boreholes in the past and look forward to many years to come.

Rob Small, co-founder and resource mobilization director, Abalimi
