

Dear Tamzyn,

"Beginning of winter 2014 saw a serious and unwelcome ingress of water in my basement. I was bailing out \pm 100 liters per day and anxious to discover the source of this flooding. It was suggested that I contact De Wets for advice and help which I did. They responded promptly to my call and after a visit from Mr Sam de Wet it was explained that I had a ground-water problem which could be completely cured by installing a de-watering system i.e. under-floor drainage in conjunction with a sump and submersible pump. I agreed to this and the work was completed in just two days with minimal disruption by a team which impressed me with their professionalism and neatness.

I now have a bone-dry basement again and would suggest an apt slogan could be "When it's wet call de Wet."

Kind regards,
Peter Wannenburgh, Fish Hoek
